Acronyms - AT: At Term; DEGs: Differentially Expressed Genes ($p < 0.05$); EO: Early Onset; FGR: Fetal Growth Restriction; IUGR: Intrauterine Growth Restriction; LO: Late Onset; PE: Preeclampsia; PT: Preterm; SEP: Severe Preeclampsia.

*Downloaded differentially expressed gene list directly from authors.

Supplemental Table 3. Entrez Gene Identifiers by Preeclampsia-Annotated Article Count.

Article Count	Gene Symbols
0	PRRG1, ZFPL1, ZNF84, ZNF646, TM9SF1, LMAN2, ILVBL, SMG5, NIPSNAP3A, ZNF330, CCDC59, SCCPDH, NIN, MBIP, KLHL28, EPS8L1, MRPS18A, LRRC1, ZNF83, CCDC47, PRRG4, RPAP3, SFXN3, RPF2, MIDN, ZNF439, TIGD7, SNX29, RDH13, LENG8, LRRC56, PUSL1, HINT3, ZNF555, CRYGN, CXorf38, ZNF114, LONRF2, DCP2, C6orf89, EP400NL, RNF222
1	ACTR3B, ADAMTSL3, AGFG1, ANXA7, ARHGAP9, ATXN7L2, BZW1, CHKA, CNOT3, CRIM1, DNAJB2, DNAJC1, DOK3, DOK6, ECM2, ENTPD4, ERFFI1, FAM120A, FBXO9, FRMD3, FXYD3, GART, HDGF, HERC4, HPCAL1, IL1RAP, IREB2, KTN1, LEO1, MAGT1, MBNL1, MFAP5, MRPL18, NFIA, NKTR, NRP2, OLFML3, ORMDL1, OSTF1, PAM, PCYOX1, PHYHIPL, POLR2H, PPP1R14B, PRKD3, PSPC1, RAPGEF3, RASGRP2, RBPM5, RFK, RGL1, RHOQ, RHPN1, SH3BGR1, SH3KBP1, SHPRH, SLC35F2, SNX3, SRP9, TARBP1, TBC1D22A, TBL1XR1, TCF7, TCP1, TGOLN2, TMEM136, TUBB, UBE2H, UPF3A, WDFY3, XPOT, YPEL4, ZFAND5, ZNF440, ZNF473
2	APLP2, BIN2, ELL2, ENTPD1, KIAA0753, KLHL7, LASP1, MICAL1, MRPL3, NAALAD2, POGZ, PPP6R3, SCP2, SDF2L1, SNAPC4, SSFA2, STK11IP, THAP5, TMEM30A, TRIM14, WBP2, ZBTB48, ZCCHC2, ZFAND2B, ZNF7, CUL2, DST, HOXB5, MBD2, MPHOSPH8, MPPE1, PTP4A1, RARRES1, SLC28A1, SLC2A3, SLC2A5, SLC9A9, TPR, ANAPC4
3	AP3S1, ATP11B, CLIC4, CSNK1G3, DSCC1, EEF1A1, GON4L, GOSR2, GPR155, HIGD1A, LIMCH1, MPHOSPH10, PNCK, PSMA2, RNF13, RPL18, SPTLC3, SSNA1, TAOK1, UGP2, CDH15, GGA1, NSF, PTGDS, TPT1, ANTXR1, LONP1, NECTIN4, PROCR, SETD1A, TRAF3, TRIM24
4-5	CLASP2, EFHD1, HMGCS1, KCNMB4, KIF2A, MARCH6, PDZRN3, GFPT1, H3F3B, QPCT, HIP1, NAIP, RNF123, APMAP, ARHGEF4, COBLL1, HIPK3, NOC3L, RGS11, SLC30A5, NDFIP1, NEBL, MARS, PHF10, STX1A, IQGAP1
6-10	BRWD1, COPS8, DNAJC10, LYPLA1, METAP1, NR2C1, PDE4DIP, TMEM45A, TRAK1, MAN1A1, PARP6, ZNF644, SLC35A2, STX16, TSPAN7, ACSS1, ALDH9A1, ARL6IP1, GDPD5, NFYC, RPS2, SLBP, TBCD, WTAP, FRMD4B, NEK11, PPM1K, SPATA13, BCAS4, KCTD11, BMP6, NDUFS7, TAF15, LRPPRC, DNAJC3, ERGIC1, GREM2, OMA1, PGLYRP1, PKP4, SPON1, YME1L1, YWHAB, DMTF1, IFITM2, ME2, MYO1B, ALDOA, HERC2, ACO2, ARRDC3, DDR1, HBD, ATXN10, ANKRD26, PBX2, RNF8, ACTR3, PPP2R5C, RASEF, USP10, JUP, CRIP2, NFIX, SCARB1, SLC02A1, ASCC3, HIF3A, IGSF8, ARHGAP21, BAIAP2, MYT1, PDXK, LAMB1, MCFD2, MME, TFAM
11-20	BASP1, CEP72, CSNK2B, FASTK, USP11, CD164, ETNK1, TMED5, UCHL5, KRT19, MNT, NUS1, CCND2, QKI, SPG7, MXI1, TSNAX, PCBP2, STK38, E2F5, CETN2, STK17B, SEC63, RASSF8, DERL3, OLFM1, ZNF185, ANXA4, TPI1, PLOD1, CCAR1, RPS6KA5, BTF3, SSR1, STK24, PLA2G16, CFLAR, NCOA1, CTTN, SEMA7A, LRRFIP1, TLE4, GSR, HNMT, HDAC9, LMAN1, GALE, TAOK2, ATRN, FAM107B, TMED1, TMED10, RPN2, MGAT3, MKNK1, SLC27A2, NUDT6, CCNC, CSNK1A1, BCORL1, RAB6B, MATR3, PIK3CB
21-30	ARID3A, CD37, SLC44A1, PAQR3, ACSL3, RAP1GDS1, POLR3A, RHEB, ECD, DVL2, HILPDA, FOXF1, NEDD4L, BCAT1, CDO1, EXOSC6, CHD8, DYRK1A, ELL, RBBP4, PPP1R15A, ING5, CXXC1, PRPS1
31-50	TRIM29, PSMC6, CALM1, KDM3A, YES1, CSNK2A2, DNM2, FBLN5, C2, ANGPTL1, ITPR1, SNAI2, KLF10, TUG1, CTSZ, CDH23, VPS35, PSME3, NPL, CTSK, SMG1, YWHAE, VPS13A, AGL, AMD1, GLUL, HEXB, BSG
51-100	LSP1, NUCB2, CEBPZ, SLC16A3, SLC6A8, PICALM, RASSF7, CSTB, SREBF1, MKKS, LPIN1, TRAF2, TPP1, PTPRU, BACH1, RNPC3, FHIT, LGALS3, AKAP12, EDNRB, BMP1, DCK
>100	STS, SET, GHR, NDRG2, CLN3, ATXN2, KHDRBS1, SPP1, PDXP, DMPK, NPEPPS, GBA, CIB1, PMP22, IDH1, TARDBP, BRAF

Supplemental Table 4. PheKnowLator-Derived Novel Phenotype Associations.

Identifier	Ignorome Hits	Domain Expert-Derived Evidence
Abnormal Mitochondria in Muscle Tissue (HP:0008316)	NDUFS7 (ncbigene:374291)	Mitochondrial dysfunction is central to the pathophysiology of preeclampsia (PMID: 33417666). Trophoblast mitochondrial function is impaired in preeclampsia (PMID: 27939475).
Systemic Lupus Erythematosus (HP:0002725)	C2 (ncbigene:717)	Women diagnosed with systemic lupus erythematosus are at increased risk of preeclampsia (PMID: 31754886).
Persistence of Hemoglobin F (HP:0011904)	HBD (ncbigene:3045)	Increased fetal hemoglobin accumulation in the placenta is associated with preeclampsia (PMID: 25628568 ; PMID: 24185004).
Elevated Plasma Branched Chain Amino Acids (HP:0008344)	PPM1K (ncbigene:152926)	Plasma branched chain amino acids were higher in women with gestational diabetes mellitus than control (PMID: 31497040). Gestational diabetes mellitus increases preeclampsia risk (PMID: 25644816).
Microcytic Anemia (HP:0001935)	HBD (ncbigene:3045)	Severe anemia is associated with higher risk of preeclampsia (PMID: 21867566).

Acronyms - HP: Human Phenotype Ontology; NCBIGene: National Center for Biotechnology Information Entrez gene identifier.

Supplemental Table 5. PheKnowLator-Derived Novel Pathway Associations.

Identifier	Ignorome Hits	Domain Expert-Derived Mechanism(s)
Complex I Biogenesis (R-HSA-6799198)	NDUFS7 (ncbigene:374291)	Trophoblasts cultured under hypoxic conditions have decreased Complex I respiration rate (PMID: 23383105). Hypoxia is thought to be central to the pathophysiology of preeclampsia (PMID: 30968806).
Mitochondrial Translation Termination (R-HSA-5419276)	MRPL3 (ncbigene:11222), MRPS18A (ncbigene:55168), MRPL18 (ncbigene:29074)	Mitochondrial dysfunction is central to the pathophysiology of preeclampsia (PMID: 33417666). Trophoblast mitochondrial function is impaired in preeclampsia (PMID: 27939475).
Respiratory Electron Transport (R-HSA-611105)	NDUFS7 (ncbigene:374291), LRPPRC (ncbigene:10128)	Placentas from preeclamptic pregnancies had decreased expression of essential electron transport chain proteins (PMID: 32916282). Abnormal electron transport is associated with early-onset preeclampsia (PMID: 29676857).
Elastic Fibre Formation (R-HSA-1566948)	MFAP5 (ncbigene:8076), FBLN5 (ncbigene:10516)	The elastic fibre system is altered in umbilical cord vessels from pregnancies complicated by preeclampsia (PMID: 10794169).
Diseases Associated with O-glycosylation of Proteins (R-HSA-3906995)	ADAMTSL3 (ncbigene:57188), SPON1 (ncbigene:10418)	Altered o-glycosylation is associated with aberrant immune cell dynamics at the maternal-fetal interface (PMID: 32760395). In severe preeclampsia, altered glycosylation of maternal plasma proteins is associated with increased monocyte adhesion (PMID: 23757314).
Rho GTPase Cycle (R-HSA-194840)	RHOQ (ncbigene:23433), RHPN1 (ncbigene:114822), ARHGEF4 (ncbigene:50649), ARHGAP9 (ncbigene:64333), ARHGAP21 (ncbigene:57584)	Human trophoblast migration is modulated by Rho GTPases (PMID: 21940708). Rho GTPases, RAC1 and CDC42, are required for prostaglandin E2-mediated human trophoblast migration (PMID: 18235104).
Protein Folding (R-HSA-391251)	TCP1 (ncbigene:6950), RGS11 (ncbigene:8786), TBCD (ncbigene:6904)	Protein misfolding and protein aggregation are associated with preeclampsia (PMID:31817906).
Resolution of Sister Chromatid Cohesion (R-HSA-2500257)	TAOK1 (ncbigene:57551), CLASP2 (ncbigene:23122)	TAOK1 negatively regulates IL-17 signaling (PMID: 29400705). In preeclampsia, IL-17 is increased in maternal serum and placentas (PMID: 32416889). Human extravillous trophoblasts undergo endoreduplication (PMID: 22877079). Abnormalities of extravillous trophoblasts have been extensively described in preeclampsia (PMID: 29701150).
Interferon Signaling (R-HSA-913531)	TRIM29 (ncbigene:23650), IFITM2 (ncbigene:10581), TRIM14 (ncbigene:9830)	Alterations in placental expression of IFN-gamma and its receptor are associated with preeclampsia pathophysiology (PMID: 15585559). Increased expression IFN-gamma is associated with impaired trophoblast invasion and migration <i>in vitro</i> (PMID: 33335575).
Epigenetic Regulation of Gene Expression (R-HSA-212165)	MBD2 (ncbigene:8932)	Placentas from pregnancies complicated by preeclampsia exhibit alterations in methylation and gene expression (PMID: 31212604).

Acronyms - R-HSA: Reactome Pathway Database; NCBI Gene: National Center for Biotechnology Information Entrez gene identifier.

Supplemental Table 6. PheKnowLator-Derived Novel Drug Associations.

Identifier	Ignorome Hits	Domain Expert-Derived Mechanism(s)
Flavin Mononucleotide (MeSH:D005486)	RFK (ncbigene:55312)	Riboflavin-deficient women are more likely to develop preeclampsia (PMID:10862839).
17-benzyl-5-androstane-3,17-diol (MeSH:C445526)	STS (ncbigene:412)	17-benzyl-5-androstane-3,17-diol is an inhibitor of steroid sulfatase (PMID: 11600235). Steroid sulfatase is increased during preeclampsia in both placenta and maternal blood and modulates s-Flt1 (PMID: 27871476).
Sodium Borate (MeSH:C010634)	STS (ncbigene:412)	Boron participates in Vitamin D metabolism (PMID: 29207789). Maternal Vitamin D levels are associated with preeclampsia risk (PMID: 27841759).
Estranes (MeSH:D004962)	STS (ncbigene:412)	Oral contraceptive use for 8 or more years before pregnancy is associated with increased risk of preeclampsia (PMID: 10640157).
HDL Cholesteryl Ester (MeSH:C059714)	SCARB1 (ncbigene:949)	In preeclampsia, decreased levels of HDL-c have been observed during the third trimester (PMID: 24989239). The HDL-c of women with preeclampsia exhibits oxidative damage (PMID: 28511654).
Glycogen (MeSH:D006003)	AGL (ncbigene:178)	Villous syncytiotrophoblast microvesicles isolated from placentas from pregnancies complicated by preeclampsia have increased glycogen content (PMID: 8514882).
Enrasentan (MeSH:C098288)	EDNRB (ncbigene:1910)	Enrasentan is a high-affinity antagonist of Endothelin Type A Receptor (PMID: 12595914). Endothelin Type A Receptor antagonism has been suggested as a potential therapeutic strategy for preeclampsia (PMID: 28264495 , PMID: 31221823).
Anti-Asthmatic Agents (MeSH:D018927)	MME (ncbigene:4311)	Women who experience symptomatic asthma during pregnancy have an increased risk of preeclampsia (PMID: 16572909).
Magnesium Oxide (MeSH:D008277)	CFLAR (ncbigene:8837)	During a clinical trial, significantly fewer women developed hypertension during pregnancy when supplemented with magnesium oxide (PMID: 1492408).
Sitagliptin Phosphate (MeSH:D000068900)	NAALAD2 (ncbigene:10003)	In gestational diabetes mellitus, Sitagliptin Phosphate ameliorates insulin resistance (PMID: 28213841). Preeclampsia is associated with increased risk of gestational diabetes mellitus in later pregnancies (PMID: 28542483). Women who experience preeclampsia are at increased risk of developing diabetes (PMID: 27646865).

Acronyms - MeSH: Medical Subject Headings; NCBIGene: National Center for Biotechnology Information Entrez gene identifier.

Supplemental Table 7. PheKnowLator-Derived Novel Gene Associations.

Identifier	Ignorome Hits	Domain Expert-Derived Mechanism(s)
<p>PLOD2 (ncbigene:5352)</p>	<p>PLOD1 (ncbigene:5351), FBLN5 (ncbigene:10516), PTGDS (ncbigene:5730)</p>	<p>Plod2, a protein associated with extracellular matrix remodeling, is upregulated in trophoblast stem cells cultured under hypoxic conditions (PMID: 27807143). Hypoxia is thought to be central to the pathophysiology of preeclampsia (PMID: 30968806).</p>
<p>KCNMB3 (ncbigene:27094)</p>	<p>KCNMB4 (ncbigene:27345)</p>	<p>KCNMB3 was differentially methylated at 2 CpG sites in cord blood samples obtained from pregnancies conceived using assisted reproductive technologies (PMID: 25580569). Women who conceive using assistive reproductive technologies are at increased risk of preeclampsia (PMID: 31046710).</p>
<p>NDUFB3 (ncbigene:4709)</p>	<p>NDUFS7 (ncbigene:374291), SPG7 (ncbigene:6687), LRPPRC (ncbigene:10128), YME1L1 (ncbigene:10730)</p>	<p>Trophoblasts cultured under hypoxic conditions have decreased Complex I respiration rate (PMID: 23383105). Oxidative stress is associated with alterations in folding and degradation of MrpL32 (PMID: 21610694).</p>
<p>HBG1 (ncbigene:3047)</p>	<p>HBD (ncbigene:3045)</p>	<p>Increased fetal hemoglobin accumulation in the placenta is associated with preeclampsia (PMID: 25628568, PMID: 24185004).</p>
<p>RBBP7 (ncbigene:5931)</p>	<p>RBBP4 (ncbigene:5928), HDAC9 (ncbigene:9734), SETD1A (ncbigene:9739), ING5 (ncbigene:84289), CSNK2A2 (ncbigene:1459), E2F5 (ncbigene:1875), H3F3B (ncbigene:3021), KDM3A (ncbigene:55818), MPHOSPH8 (ncbigene:54737), MBD2 (ncbigene:8932), CXXC1 (ncbigene:30827), BCORL1 (ncbigene:63035)</p>	<p>RBBP7 was identified using co-expression network analysis as a gene to prioritize for investigation for association with preeclampsia (PMID: 24219996).</p>
<p>SLC30A7 (ncbigene:148867)</p>	<p>SLC30A5 (ncbigene:64924)</p>	<p>SLC30A7 is involved in regulation of cellular zinc and low levels of serum zinc are associated with preeclampsia (PMID: 26389947).</p>
<p>SLC44A5 (ncbigene:204962)</p>	<p>SLC44A1 (ncbigene:23446)</p>	<p>SLC44A5 is a choline transporter, and choline supplementation down-regulates preeclampsia-associated protein sFLT1 (PMID: 23195033).</p>

Identifier	Ignorome Hits	Domain Expert-Derived Mechanism(s)
RHOV (ncbigene:58480)	RHOQ (ncbigene:23433), RHPN1 (ncbigene:114822), BIN2 (ncbigene:51411), ARHGEF4 (ncbigene:50649), ARHGAP9 (ncbigene:64333), ARHGAP21 (ncbigene:57584), RAP1GDS1 (ncbigene:5910), SPATA13 (ncbigene:221178)	JAK/STAT signaling alters EGF-induced trophoblast invasion <i>in vitro</i> (PMID: 28542650). RhoU is downstream of the JAK/STAT signaling pathway (PMID: 29440639).
CCT2 (ncbigene:10576)	TCP1 (ncbigene:6950), STK24 (ncbigene:8428), DNAJC3 (ncbigene:5611), USP11 (ncbigene:8237), MKKS (ncbigene:8195), RGS11 (ncbigene:8786), DNAJB2 (ncbigene:3300)	Analysis of differentially expressed genes in preeclampsia reveals disruption of the CCT2-containing pathway “formation of tubulin-folding intermediates by CCT/Tric” (PMID: 30589053).

Supplemental Table 8. PheKnowLator-Derived Novel Gene Ontology Associations.

Identifier	Ignorome Hits	Domain Expert-Derived Mechanism(s)
Mitochondrial Translational Elongation (GO:0070125)	MRPL3 (ncbigene:11222), MRPS18A (ncbigene:55168), MRPL18 (ncbigene:29074)	Mitochondrial dysfunction is central to the pathophysiology of preeclampsia (PMID: 33417666). Trophoblast mitochondrial function is impaired in preeclampsia (PMID: 27939475).
Cellular Zinc Ion Homeostasis (GO:0006882)	SLC30A5 (ncbigene:64924)	Preeclampsia is associated with lower levels of zinc in maternal serum (PMID: 26389947).
Mitochondrial Respiratory Chain Complex I (GO:0005747)	NDUFS7 (ncbigene:374291)	Trophoblasts cultured under hypoxic conditions have decreased Complex I respiration rate (PMID: 23383105). Hypoxia is thought to be central to the pathophysiology of preeclampsia (PMID: 30968806).
Cul2-RING Ubiquitin Ligase Complex (GO:0031462)	CUL2 (ncbigene:8453)	miRNA-584 is differentially expressed in preeclampsia and targets CUL2 (PMID: 27529341).
Hemoglobin Complex (GO:0005833)	HBD (ncbigene:3045)	Maternal hemoglobin concentration is associated with higher odds of preeclampsia (PMID: 30994929).
Calmodulin Binding (GO:0005516)	CALM1 (ncbigene:801), IQGAP1 (ncbigene:8826), BASP1 (ncbigene:10409), MYO1B (ncbigene:4430), PNCK (ncbigene:139728)	CALM1 (Calmodulin 1) is differentially expressed in severe early-onset preeclampsia (PMID: 33754042). A protein-protein interaction network identified IQGAP1 as related to preeclampsia but poorly explored or of unknown preeclampsia pathophysiology (PMID: 22873350).
Sister Chromatid Cohesion (GO:0007062)	TAOK1 (ncbigene:57551), CLASP2 (ncbigene:23122)	TAOK1 negatively regulates IL-17 signaling (PMID: 29400705). In preeclampsia, IL-17 is increased in maternal serum and placentas (PMID: 32416889). Human extravillous trophoblasts undergo endoreduplication (PMID: 22877079). Abnormalities of extravillous trophoblasts have been extensively described in preeclampsia (PMID: 29701150).
Histone Binding (GO:0042393)	H3F3B (ncbigene:3021), MPHOSPH8 (ncbigene:54737), SET (ncbigene:6418)	Human trophoblast differentiation is associated with epigenetic changes (PMID: 31294776). Preeclampsia is associated with epigenetic alterations (PMID: 31343798). H3F3B is induced in preeclampsia (PMID: 16129025).
mRNA Splicing, via Spliceosome (GO:0000398)	RNPC3 (ncbigene:55599), ECD (ncbigene:11319), CCAR1 (ncbigene:55749), PCBP2 (ncbigene:5094)	Alternative splicing affects many placental and preeclampsia-related genes (PMID: 33433680). Alternative splice variants of sFlt1 (PMID: 19147226) mineralocorticoid receptor (PMID: 31197761) are associated with preeclampsia.
Actin Filament Binding (GO:0051015)	ACTR3 (ncbigene:10096), NEBL (ncbigene:10529), ACTR3B (ncbigene:57180), MYO1B (ncbigene:4430), COBLL1 (ncbigene:22837), ZNF185 (ncbigene:7739), ITPRID2 (ncbigene:6744)	Preeclampsia is associated with altered actin polymerization via endothelial protein C receptor (PMID: 32003123).

Supplemental Table 9. PheKnowLator-Derived Novel Disease Associations.

Identifier	Ignorome Hits	Domain Expert-Derived Mechanism(s)
Galactosemia (DOID:9870)	GALE (ncbigene:2582)	Galactosemia is caused by mutations in one of three genes needed to metabolize galactose to glucose: GALT, GALK1, and GALE (PMID: 30451973). Hypoglycemia can present clinically as galactosemia (PMID: 9832597). Preeclampsia increases the risk of neonatal hypoglycemia (PMID: 22525036).
X-linked Ichthyosis (DOID:1700)	STS (ncbigene:412)	X-linked ichthyosis is a rare dermatological condition caused by STS deficiency (PMID: 30768640). STS expression is increased in preeclamptic placentas and maternal whole blood (PMID: 27871476).
Progressive Bulbar Palsy (DOID:681)	RFK (ncbigene:55312)	Riboflavin Kinase is an essential enzyme for catalyzing the phosphorylation of riboflavin (PMID:12623014). Progressive bulbar palsy is caused by riboflavin transporter deficiency (PMID: 26973221). Riboflavin deficiency is a known risk factor for preeclampsia (PMID: 10862839).
Amyotrophic Lateral Sclerosis (DOID:332)	TARDBP (ncbigene:23435)	TARDBP encodes the protein TDP-43 which accumulates in amyotrophic lateral sclerosis (PMID: 28476168). AhR agonists increase TDP-43 in neurons. Placentas with high AhR expression during fetal development are highly susceptible to environmental toxicants (PMID:20354149). AhR has been proposed as a mechanism for the protective effects of cigarette smoke on preeclampsia (PMID: 21864991).
Attention Deficit Hyperactivity Disorder (DOID:1094)	STS (ncbigene:412)	The association between attention deficit hyperactivity disorder and STS dysfunction has been well established (PMID: 21255266). Offspring of preeclamptic mothers are 3-fold more likely to be diagnosed with attention deficit hyperactivity disorder (PMID: 30605798).
Pleural Cancer (DOID:5158)	SPP1 (ncbigene:6696)	SPP1 (secreted) has been shown to both regulate angiogenesis and inflammation associated with tumor growth and promote cancer cell survival, elements vital to the pathogenesis of pleural cancer (PMID: 22370646). SPP1 has been to be increased in preeclamptic patients with endothelial injuries (PMID: 19943814).
Gaucher's Disease (DOID:1926)	GBA (ncbigene:2629)	Gaucher's disease is caused by mutations in GBA (PMID: 18338393). It's been hypothesized that increased GBA expression might relate to placentation through decreased BMP4 signaling or vascularization through downregulation of TFEB (PMID: 25552189).
Fatty Liver Disease (DOID:9452)	STS (ncbigene:412)	STS expression has been shown to be induced in response to inflammation-activated NF-κB, a recognized mechanism in the development of chronic inflammatory liver disease (PMID: 26220752). STS expression is increased in the placenta and maternal whole blood samples of preeclamptic patients (PMID: 27871476).
